Syner·G

The Roadmap Swimlane Framework

Eight lanes. One plan. Every decision made together.

Development programs rarely stall on the science. They stall where one function hands off to the next. A board-ready roadmap puts every workstream on one timeline, so you can see the handoffs before they become delays.

Where Lanes Meet

01 Tox material = clinical material?
Lock the process before the tox batch, or plan the comparability bridge now. (IND-Enabling: Nonclinical + CMC)

02 Phase-appropriate specs.
Set specifications against the filing strategy, not after it. (IND-Enabling: CMC + Regulatory)

03 First GMP lot.
Quality systems and suppliers qualified before the campaign is booked. (IND & Phase 1: Quality + CMC)

04 First patient, first vial.
Plan drug product timing with the protocol, not after it. (Phase 2: Clinical + Clinical Supply)

05 Every lane at the gate.
Readiness judged across all eight lanes, not only the one that owns the deadline. (Pivotal & Filing: all eight lanes)

Bottom Line

A roadmap your board can defend is one where every lane can see every other. When regulatory, CMC, quality, and nonclinical decisions are made together, gates stop being surprises.

How Syner-G Helps

- Integrated development strategy and roadmaps
- Scientific, Regulatory & Quality expertise in one team
- CDMO and CRO selection that follows the plan
